

IMPLEMENT CLIENT SCRIPT & UI POLICY (INCIDENT)

Phase 1: Brainstorming & Ideation Phase

Date	30/09/2026
Team ID	6ab223b8fc67a5bc022251cc
Project Name	IMPLEMENT CLIENT SCRIPT & UI POLICY (INCIDENT)

Introduction:

Incident Management is one of the core processes in ServiceNow that helps organizations track, manage, and resolve issues efficiently. Maintaining accurate and complete incident data is essential for effective reporting, SLA compliance, and service quality. This project demonstrates how UI Policies and Client Scripts can be used to enforce business rules, improve data integrity, and enhance user experience on Incident forms.

Problem Statement:

Incident records often contain incomplete or inconsistent information due to manual data entry. Missing mandatory fields, incorrect urgency values, and unauthorized updates can affect incident resolution and reporting.

Objective:

To identify a solution that improves data quality, automates validations, and enforces business rules using ServiceNow UI Policies and Client Scripts.
